

## UniRac Reaches Significant Milestone in PV Mounting Market

ALBUQUERQUE, NEW MEXICO, September 19, 2007 — UniRac has reached a significant milestone having shipped over 1 million linear feet of aluminum rail for photovoltaic (PV) mounting systems in the U.S., for the first 8 months of 2007. UniRac estimates that volume of rail would reach from San Francisco, CA to Reno, Nevada, reflecting the incredible demand UniRac has seen for its racking solutions.

UniRac leads the PV mounting market with industry-leading technology and a breadth of product solutions and services designed to meet the needs of any type of solar installation.

Since delivering its first PV mounting system in 1998, UniRac has experienced remarkable growth of its innovative and superior racking systems, which have been used for many prominent installations such as the Google Campus in Mountain View, California, the largest corporate solar installation in the U.S. to date. UniRac was also chosen for the solar installation at Universal Studios, in CA, where UniRac provided a custom designed solution that helped bring the project in on schedule, under very tight timelines.

“Our numbers speak for themselves, we’ve hit a milestone far earlier in the year than in the past,” said UniRac CEO Doug May “UniRac’s PV Mounting systems are field-proven, offering customers high quality, versatile systems that are quick and simple to install, significantly reducing time and costs associated with solar projects. Our accomplishments to date are great, but when you are constantly listening to your customers and partners, you keep improving. This milestone is exciting for us as a company.”

“We have always been able to rely on UniRac to respond quickly to our needs,” said Michael Kahn, President of Kahn Solar. “We’ve implemented many custom installations using UniRac’s mounting systems, so when we got the project at Universal Studios in California, I knew we could count on UniRac to come up with a design that would work for this challenging site, and be able to deliver according to our construction schedule.”

With almost 5 million linear feet of rail shipped since its launch in 1998, UniRac continues to be the proven market leader in the PV Mounting market in North America. UniRac will be showcasing its new solutions at Solar Power 2007, in Long Beach, CA, from September 24-27, 2007, booth # 546.

### *About UniRac*

Based in Albuquerque, New Mexico, UniRac ([www.unirac.com](http://www.unirac.com)) was founded in 1998 and quickly became the industry leader with a reputation for superior products, responsive support and outstanding services. Speed and high-quality installation options are the trademark of all our PV racking product lines. UniRac delivers innovation, on time, and with award-winning results.
